CAPTURE API Specification

The purpose of this document is to describe the CAPTURE API Operation to enable merchant developers to integrate their webpages with the EVO Gateway. Refer to the EVO Gateway -0 – Overview document for how this API Operation is used in the merchant processes.

A CAPTURE API Operation is required after an AUTH Request, not a PURCHASE Request.

#### **Transaction Status**

All transactions that can be captured have the status SET\_FOR\_CAPTURE, which means the payment is authorised, through the AUTH/PURCHASE/VERIFY – API Operation (see EVO Gateway - 2 - AUTH-PURCHASE-VERIFY - Direct API or <math>EVO Gateway - 2 - AUTH-PURCHASE-VERIFY - Hosted Payment Page, as appropriate to the integration method)).

The successful CAPTURE API Operation will set the transaction status to CAPTURED.

A CAPTURE API Operation can be unsuccessful for two reasons:

- The transaction status is set to ERROR if there was an error in the API Operation
  - o usually the result of a communication error between the customer browser and the EVO Gateway
- The transaction status is set to DECLINED if:
  - o the card payment was refused by the acquirer, or
  - o the 3DS authentication failed

A failure response is sent.

#### **Funds Transfer**

The transfer of funds from the customers' accounts to the merchant account is not instantaneous.

The EVO Gateway CAPTURE API Operation flags transactions for batch processing later in the day, according to the acquirers' requirements. This batch process informs the acquirer that the funds should be transferred.

The actual transfer of funds is performed by the acquirer.

This delay allows for the VOID API Operation (see *EVO Gateway – 4 - VOID*) to be performed before the CAPTURE API Operation.

Only the full authorised amount of the transaction can be captured, based on the amount authorised in the AUTH API operation. Partial captures are currently not supported.

#### **Full or Partial Captures**

The EVO Gateway caters for full or partial captures. If the full amount is not captured the residual amount is released to the cardholder. Multiple partial captures are not currently catered for.

**API Specification Session Token API Operation** 

## 1.1 Session Token Request

#### **1.1.1** Format

POST Request to Session Token Request URL (see Section 3 of the EVO Gateway – 0 – Overview document)

#### 1.1.2 Definition

Parameter	Data Type	Mandatory	Description
merchantId	Integer (18)	Υ	The identifier for the merchant in the EVO Gateway provided at onboarding
password	String (64)	Υ	The merchant's password to the EVO Gateway provided at onboarding
action	String (enum)	Υ	Must be "CAPTURE"
timestamp	Integer (18)	Υ	Milliseconds since 1970-01-01 00:00:00
allowOriginUrl	String (253)	Y	The merchant's URL that will make the Capture Request (section 2.1) Cross-Origin Resource Sharing (CORS) headers will allow only this origin.
originalTxld	String (18)	N	The EVO Gateway transaction Id of the transaction to be captured This will have been returned in the txld field of the Auth/Purchase Response – Processed (see EVO Gateway – 2 – AUTH-PURCHASE- VERIFY – Direct API or EVO Gateway – 2 – AUTH-PURCHASE-VERIFY – Hosted Payment Page, as appropriate to the integration method)
originalMerchantTxld	String (50)	Y	The merchant's original transaction identifier of the transaction to be captured, that was provided in the <i>merchantTxId</i> field of the Auth/Purchase Session Token Request and Auth/Purchase Request (see <i>EVO Gateway – 2 – AUTH-PURCHASE-VERIFY – Direct API</i> or <i>EVO Gateway – 2 – AUTH-PURCHASE-VERIFY – Hosted Payment Page</i> , as appropriate to the integration method)
agentId	String (18)	N	Identifier of the merchant's operator or agent on behalf of the end customer, if the operation is not performed by the merchant, and the merchant wants to track the operator who performed the transaction Note: this is different to the <i>operatorId</i> and <i>userAgent</i> fields of the Auth/Purchase Response – Processed (see <i>EVO Gateway – 2 – AUTH-PURCHASE-VERIFY – Direct API</i> or <i>EVO Gateway – 2 – AUTH-PURCHASE-VERIFY – Hosted Payment Page</i> , as appropriate to the integration method)
amount	BigDecimal (10.2 or 10.3) BigDecimal (15.2 or 15.3)	Y	The amount to capture  Can be less than or equal to the original transaction amount  Cannot be more than the original transaction amount

### 1.1.3 Example

merchant Id=1111111 & password=klw74U6yt40 mNo& original TxId=123456789 & original Merchant TxId=XYZ123456789 & original TxId=XYZ123456789 & original Merchant TxId=XYZ123456789 & original Merchant TxId=XYZ123456789 & original Merchant TxId=XYZ123456789 & original Merchant TxId=XYZ12345678 & original Merchant TxId=XYZ12349 ABC & allow Origin Url=www.merchants ite.com & action=CAPTURE & timestamp=1249751864238 & agent Id=brian 01 & action=CAPTURE & timestamp=1249751864238 & action=CAPTURE & timestamp=1249751864 & action=CAPTURE & timestamp=124975186 & action=CAPTURE & timestamp=124975186 & action=CAPTURE & timestamp=124975186 & action=CAPTURE & action=CAPTURmount=120

## 1.2 Session Token Response - Processed

#### **1.2.1** Format

**JSON** 

#### 1.2.2 Definition

Parameter	Data Type	Description
result String (40)		Will always be "success"
merchantId Integer (18) token String (40)		The merchantId value received in the Session Token Request (section 1.1)
		The Session Token that is a one-time use, hexadecimal string The Session Token that must only be used for the Capture Request (see Section 2.1) Session tokens are valid for 3600 second (1 hour) after which they expire Any requests with expired session tokens will be rejected
resultId String (40)		Hexadecimal string that is to be used in any support request calls
processingTime	Integer (6)	The time in seconds for the process to complete
additionalDetails	Array	Not used – will always be "{}" or not included

### 1.2.3 Example

```
{
    "result":"success",
    "merchantId":1111111,
    "token":"abcde12345abcde12345",
    "resultId":"fghij67890fghij67890",
    "processingTime": 2
}
```

## 1.3 Session Token Response - Not Processed

#### **1.3.1** Format

**JSON** 

#### 1.3.2 Definition

Parameter Data Type		Description
result String (40)		Will always be "failure"
resultId String (40)		Hexadecimal string that is to be used in any support request calls
processingTime Integer (6)		The time in seconds for the process to complete
additionalDetails Array		Not used – will always be "{}" or not included
errors	String Array	List of issues

### 1.3.3 Example

```
{
    "result":"failure",
    "merchantId":1111111,
    "errors":[ { "messageCode": "This field is required in [REQUEST]", "fieldName": "password" } ],
    "processingTime": 4
}
```

## 2.1 Capture Request

#### **2.1.1** Format

POST Request to Action Request URL (see Section 3 of the EVO Gateway – 0 – Overview document)

#### 2.1.2 Definition

Parameter	Data Type	Mandatory	Description
merchantId	Integer (18)	Υ	The identifier for the merchant in the EVO Gateway provided at on-boarding This must be the same as that sent in the Session Token Request (section 1.1)
token	String (40)	Y	Session Token received in the Session Token Response - Processed (section 1.2)

### **2.1.3 Example**

merchantId=1111111&token=abcde12345abcde12345

## 2.2 Capture Response - Processed

### **2.2.1** Format

JSON

#### 2.2.2 Definition

Parameter	Data Type	Description		
result	String (40)	Will always be "success"		
merchantId Integer (18)		The merchantId value sent in the Session Token Request (section 1.1)		
action	String (enum)	Will always be "CAPTURE"		
originalMerchantTxId	String (50)	The merchant transaction	n identifier of the transaction that was captured	
originalTxId Integer (18)		The EVO Gateway transaction Id of the transaction captured sent in the Session Token Request (section 1.1)		
txld	Integer (18)	The unique identifier for the capture transaction in the EVO Gateway		
amount BigDecimal (15.2 or 15.		The transaction amount captured sent in the Session Token Request (section 1.1)		
customerId String (20)		The EVO Gateway customer identifier used in the original and capture transactions		
pan String (100)		The customer account values	alue/number used in the original and the capture	
brandId	Integer (18)	The <i>brandId</i> value for the	e original and the capture transaction	
paymentSolutionId	Integer (18)	The paymentSolutionId value used in the original and capture transactions		
	String (enum)	The status of the transaction in EVO Gateway:		
		Status	Condition	
status		SET_FOR_CAPTURE	If "CAPTURE" successful All capture transactions are batch processed, when the status will be set to CAPTURED	
		ERROR	If an error was returned by the payment process	
errors	String (400)	Any errors that occurred during the successful processing of a transaction		
resultId	String (40)	Hexadecimal string that	is to be used in any support request calls	
additionalDetails	Array	Not used – will always be "{}" or not included		

Parameter	Data Type	Description
processingTime	Integer (6)	The time in seconds for the process to complete
customParameter1Or customParameter20Or	String (50)	The original 20x (50 character) free text fields provided by the merchant in the Session Token Request of the Auth/Purchase/Verify API Operation
customParameter1 customParameter20	String (50)	The 20x (50 character) free text fields provided by the merchant in the Session Token Request of the Auth/Purchase/Verify API Operation with the non-Basic Latin characters replaced by a space character.  These values will have been sent for payment processing.

### 2.2.3 Example

```
{
    "result":"success",
    "merchantId":111111,
    "originalMerchantTxId":"abc123",
    "originalTxId":123,
    "amount":12.50,
    "customerId":"mgn456",
    "action":"CAPTURE",
    "pan":"45ae201ghy23498FjMj701",
    "brandId":3,
    "paymentSolutionId":500,
    "status":"SET_FOR_CAPTURE",
    "resultId": "4fd9f223-bb1a-4879-a6e6-81a10b53bdca",
    "processingTime": 948
}
```

**API Specification** 

## 2.3 Capture Response - Not Processed

**2.3.1 Format** 

**JSON** 

#### 2.3.2 Definition

Parameter	Data Type	Description
result	String (40)	Will always be "failure"
resultId	String (40)	Hexadecimal string that is to be used in any support request calls
additionalDetails	Array	Not used – will always be "{}" or not included
processingTime	Integer (6)	The time in seconds for the process to complete
errors	String Array	List of errors.
customParameter1Or customParameter20Or	String (50)	The original 20x (50 character) free text fields provided by the merchant in the Session Token Request of the Auth/Purchase/Verify API Operation
customParameter1 customParameter20	String (50)	The 20x (50 character) free text fields provided by the merchant in the Session Token Request of the Auth/Purchase/Verify API Operation with the non-Basic Latin characters replaced by a space character.
		These values will have been sent for payment processing.

## 2.3.3 Example
